

Matching Papers and Reviewers

The Papers

- Cody – How energy efficient is rental housing and the appliances they use? Lots of data handling of the RECS data. Some econometrics or t-tests depending on approach.
- Barbara – Earthquakes and natural gas. Depending on some phone calls, may turn into learning about REMI and finding other regional economic models of natural disaster interruption of natural gas. Intuition says they have does this for Portland.
- Kyle – Rural electrification in India. Will focus on wood but really looking at reliability trade offs.
- Victoria – Environmental Kuznets curve. As income increases, environment gets worse then better. Does not always happen that way. Usually works with cute and visible.
- Hannah – How to deal with the duck curve? Probably deal with RTO/ISO operations with focus not on load or peak load but ramping rates.
- Jason – Meta-analysis of the costs of green mining technology. Costs are all over the map. Classic motivation for meta-analysis.
